

## ABSTRACT

The present invention relates to a resin composition having an easy-openable property which comprises an ethylene polymer composition (D) comprising 5 to 65 wt% of a propylene polymer (A), 1 to 35 wt% of an ethylene/ $\alpha$ -olefin random copolymer (B) having a density of less than 895 kg/m<sup>3</sup> and 10 to 85 wt% of an ethylene polymer (C) having a density of 895 kg/m<sup>3</sup> and more (in a total amount of 100 wt%), and a film thereof. The resin composition having an easy-openable property is useful as lid materials especially for propylene polymer containers and provides excellent sealability and easy openability and further provides excellent heat resistance and oil resistance.
